

Account intelligence

From a territory book to the next best seller action

Transparent scoring. Explainable prioritization. Actionable outreach.

Developed by

Sydney Chin / Tim Zhou / Patrick McBride

EXECUTIVE VIEW

A territory book becomes a finite action system

BobBee separates evidence, deterministic decisions, and generative assistance so sellers can trust the ranking and act on it.

1,911

accounts normalized into one territory book

240

accounts activated in current-quarter cadences

4

purpose-built outreach motions

34

accounts withheld for missing decision-maker

THE DECISION LOOP

01

Unify

ISC, ZoomInfo, Salesloft, install base and signals

02

Score

Fit, momentum, whitespace and urgency become an inspectable score

03

Route

Quarter, cadence, rank and start date turn the score into work

04

Activate

Daily email, call and pre-call context meet the seller in flow

Design principle

Rank first. Explain always. Generate only where language adds value.

SYSTEM ARCHITECTURE

One intelligence chain, three distinct responsibilities

Blue is deterministic product logic. Purple is watsonx-generated language. The boundary is explicit by design.

EVIDENCE

- 01 Territory and coverage
- 02 IBM spend and trend
- 03 Install base
- 04 Company scale
- 05 Decision-makers
- 06 Recent buying signals

DECISION ENGINE

- 01 Eligibility gate
- 02 Weighted score
- 03 Tier assignment
- 04 Quarter segmentation
- 05 Cadence match
- 06 Within-cadence rank

SELLER EXPERIENCE

- 01 Priority account book
- 02 Recommended play
- 03 Daily schedule
- 04 Account detail
- 05 Pre-call brief
- 06 Ask BobBee

Control point No decision-maker -> held out. No model response -> deterministic fallback. No hidden ranking step.

PORTFOLIO SHAPE

The book is broad; the active quarter is deliberately narrow

The engine focuses capacity without discarding future value. Every account remains visible in a named bucket.

PRIORITY TIERS

GEOGRAPHIC COVERAGE

Readout 12.6% of the book enters live cadences this quarter; 74.3% is preserved for later timing.

SCORING ANATOMY

The score is a lens, not an oracle

The account score combines commercial evidence and observable momentum. Tiering provides a stable comparison layer before timing and capacity are applied.

SCORE DISTRIBUTION

48.3

median account score

87.9

highest account score

EVIDENCE FAMILIES

IBM position

Current spend, prior spend and trend

Whitespace

Missing cloud, power, storage and software footprint

Market scale

Revenue and employee scale

Engagement

Decision-maker availability and contact depth

Momentum

Recent expansion, funding, leadership and risk signals

Competitive posture

Incumbent platform and displacement opportunity

The score is never the final action. Eligibility, quarter timing, cadence fit and capacity complete the decision.

APPLICATION VIEW

The prioritized account book keeps evidence at the point of choice

Sellers can search, filter by signal, move between named buckets, and open any row to inspect the underlying account intelligence.

Figure 1. Live BobBee account book after scoring and cadence assignment. Captured from the application.

APPLICATION VIEW

An account explanation, not just a score

The detail view brings together the recommendation, IBM commercial context, external company facts, contacts, cadence position and recent signals.

Figure 2. Live account-detail view for Vertex Municipal. Captured from the application.

ACCOUNT DEEP DIVE

Vertex Municipal

Government, State/Provincial/Local / Irvine, CA / New (Active)

72.2

score / tier 1

\$21.7B

annual revenue

80,094

employees

#8

rank in cadence

RECOMMENDED PLAY

Displace Competitor

Lead with displace competitor; the strongest current signal is earnings financial.

WHY THIS ACCOUNT

- 01 Growing IBM spend trend
- 02 10 known contacts; decision-maker available
- 03 2 recent signal(s)
- 04 Assigned to Targeted Outreach Cadence 3

SIGNALS

Earnings Financial

Vertex Municipal reports Q4 revenue up 446% year over year

Layoffs Restructuring

Vertex Municipal restructuring to cut 17800 jobs

PORTFOLIO OPPORTUNITIES

The intelligence layer reveals repeatable plays across the book

Play assignment turns individual account evidence into an operating portfolio that sales leaders can inspect and rebalance.

RECOMMENDED PLAYS

LARGEST INDUSTRY BOOKS

1,829

accounts with at least one whitespace tag

510

accounts showing at-risk spend

381

accounts showing growing spend

ACTIVATION MECHANICS

Capacity becomes a visible design choice

Each active cadence is capped, ranked and distributed across weekdays. Overflow is named and retained rather than silently dropped.

CURRENT-QUARTER CADENCES

240

scheduled into current-quarter cadences

217

capacity overflow retained for future work

34

withheld until a decision-maker is found

Operational contract

Every activated account has a play, cadence, rank and dated sequence of touches.

SELLER WORKFLOW

Intelligence resolves into today's work

The dashboard is the final compression layer: a morning brief, today's emails and calls, and access to deeper analytics when needed.

Figure 3. Live BobBee dashboard after the territory book is activated. Captured from the application.

TRUST AND GOVERNANCE

Deterministic where it must be; generative where it helps

BobBee keeps model-generated language downstream from the ranking so a model outage cannot change account priority, cadence assignment or schedule.

CAPABILITY	SOURCE	CONTROL
Account eligibility	Deterministic	Decision-maker gate
Score and tier	Deterministic	Weighted application logic
Quarter and cadence	Deterministic	Timing, fit and capacity
Email draft	Deterministic	Contextual templates
Sales angle	watsonx.ai	Granite with deterministic fallback
Pre-call brief	watsonx.ai	Granite with deterministic fallback

Source note: all account and activity data in this demo is deterministic synthetic data; external systems are represented locally.

METHODOLOGY IN PRODUCT

The explanation is available inside BobBee

Methodology is not buried in a technical appendix. Sellers can revisit the five stages from Profile > Settings > How account intelligence works.

Figure 4. Live in-product account-intelligence methodology. Captured from the application.

FIELD GUIDE

What a seller can inspect on every account

01	Identity	Account, coverage ID, industry and location
02	IBM position	Relationship, current/prior spend, trend and installs
03	Company context	Revenue, employees and known contacts
04	Momentum	Dated signals and news summaries
05	Decision	Score, tier, urgency, recommended play and angle
06	Activation	Cadence, within-cadence rank and scheduled touches

Developed by Sydney Chin, Tim Zhou, and Patrick McBride
